

# **10MW Solar Storage Container Used on Maltese Farms**

## Overview

---

Can floating solar farms be developed in Maltese territorial waters?

The Regulator for Energy and Water Services (REWS) received 13 proposals for potential development of floating solar farms in Maltese territorial waters. The submissions were presented as part of the Preliminary Market Consultation – PMC in order to evaluate the market for photo-voltaic panels on sea surface.

How can Malta benefit from a 300 MW PV farm?

Malta's abundant solar resource, characterized by consistent sunlight throughout the year, effectively complements the variability of wind energy. By integrating a 300 MW PV farm, the energy production gaps caused by low wind speeds can be mitigated, resulting in a more balanced and reliable renewable-based VPP system.

Are floating offshore turbines a viable option in the Maltese EEZ?

As a result, floating offshore turbines are the only viable option for these areas. In addition to wind resources, the Maltese EEZ also offers significant solar energy potential. The region benefits from high levels of solar irradiance, making it an ideal candidate for the deployment of floating offshore PV systems.

Why should a 300 MW PV farm be integrated?

By integrating a 300 MW PV farm, the energy production gaps caused by low wind speeds can be mitigated, resulting in a more balanced and reliable renewable-based VPP system. This integration significantly enhances the overall capacity factor of the combined energy system.
