

2MW Majuro Smart Photovoltaic Energy Storage Container for Data Centers

Overview

Why should you choose a modular solar power container?

Go big with our modular design for easy additional solar power capacity. Customize your container according to various configurations, power outputs, and storage capacity according to your needs. Lower your environmental impact and achieve sustainability objectives by using clean, renewable solar energy.

What is the PV power consumption of a data center?

During the period from 8:25 to 17:07, the PV power generation is higher than 17.5 MW. Therefore, during this time, the power consumption of the data center can be fully supplied by the PV system, and the excess PV power is used for the charging process of CAES system to compress the air and store the compressed energy.

What happens if PV power generation is below 5 MW?

It is worth noting that when the PV power generation is below 5 MW, the PV system can not operate. Therefore, the grid power supply time continues until 7:32, when the PV power generation is higher than 5 MW. At this time, the PV system begins to operate.
