

# 5g base station distribution box details

## Overview

---

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

Can a 5G base station withstand high humidity?

Base stations located in more tropical or humid climates should be engineered to withstand high levels of humidity and still maintain their performance and lifespan. Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions.

What is a 5G Brain Center?

Often referred to as the brain center, this includes: Baseband Unit (BBU): Handles baseband signal processing. Remote Radio Unit (RRU): Converts signals to radio frequencies for transmission. Active Antenna Unit (AAU): Integrates RRU and antenna for 5G-era efficiency. 2. Power Supply System.

How will 4G and 5G change the world?

As the world transitions from 4G to 5G, the shift to these new, far more powerful networks will also require a shift in the way base stations are designed and configured.
