

60kW Folding Container for Agricultural Irrigation in Iraq

Overview

Does Iraq have an irrigation system?

Iraq has a unique irrigation system since the early history, these systems are functioning through many irrigation projects built over Tigris and Euphrates Rivers. Irrigation projects include several categories, which are dams, barrages, canals, drains, pumping stations, regulators, and reservoirs.

How does drip irrigation work in Kurdistan?

This system delivers water directly to the plant roots through a network of tubes, minimizing evaporation and runoff. Drip irrigation is particularly beneficial in Kurdistan, where water resources can be limited. By reducing water usage by up to 60%, farmers can cultivate their lands more sustainably while conserving precious water resources.

Why should you invest in irrigation solutions in Kurdistan-Iraq?

Our focus on innovative irrigation solutions is designed to optimize water usage, enhance soil quality, and support the agricultural communities we serve, particularly in arid and semi-arid regions such as Kurdistan-Iraq. In Kurdistan-Iraq, agriculture is a vital part of the economy and a key source of livelihood for many families.

Which is the largest irrigation branch in Iraq?

Also, Hilla branch which is the largest branch in Iraq from Euphrates, where this branch is irrigating several irrigation projects. On Tigris basin, there are Jazeera project irrigated by pumping from Mosul Dam, Kirkuk project that is irrigated from Lesser Zab River, and Diyala are projects.
