

72v generator with 3kv inverter

Overview

What is a 72 volt DC generator?

A 72 volt DC generator, also known as a 72 Vdc generator, is a type of generator that operates at 72 volts. These generators have several advantages over 24 or 48 Vdc systems, including faster charge time and fewer amp requirements for the same power output. They are commonly used in mobile applications and as backup for solar installations.

What makes Innotec Power's 72V generators efficient?

Innotec Power provides the most efficient solutions available for 72V DC Generators and 72V Alternators. This is achieved through custom mounting and rpm options.

Can a 72 volt DC generator be used as a starter?

The 72 Volt DC Generators can also be used as the starter of an engine/or prime mover. Providing feedback between the generator and controller will allow the generator to be used as a starter for the application.

What is the difference between a 10 kW & 24 VDC generator?

The main difference lies in the system design and amperage. A 10 kW - 72 Vdc system requires 140 amps, while a 10 kW - 24 Vdc system requires 400 amps. Lower amps means less heat and smaller gauge conductors, leading to faster charge times and fewer amp requirements for the same power output.
