

# 80 000 watt solar power generation equipment

## Overview

---

What is a 80 kW solar system?

These 80 kW size grid-connected solar kits include solar panels, DC-to-AC inverter, rack mounting system, hardware, cabling, permit plans and instructions. These are complete PV solar power systems that can work for a home or business, with just about everything you need to get the system up and running quickly.

How much space does a 80kW Solar System need?

A 80kW Solar Kit requires up to 5,700 square feet of space. 80kW or 80 kilowatts is 80,000 watts of DC direct current power. This could produce an estimated 9,000 kilowatt hours (kWh) of alternating current (AC) power per month, assuming at least 5 sun hours per day with the solar array facing South.

How many solar panels does a 80000 watt solar system need?

A 80000 watt solar system requires 130-200 solar panels. You can save space by choosing bifacial modules. They have an active rear side which gives up to 33% more production to the front side.

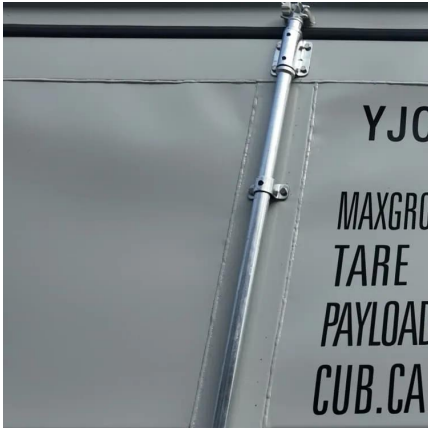

How much energy does an 80kW Solar System produce per day?

For instance, the amount of energy that a 80kw solar system produce per day in summer California is going to be around 400-480 kWh. However, in New York the same installation is more likely to make only 250-350 kWh per day. The 80kw solar system size will depend on the PV modules that you'll choose.
