# After-sales service for wind-resistant EU mobile energy storage containers

## Overview

---

How does energy storage work in the EU?

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example on a sunny or windy day - and releasing it when more energy is needed.

What is mobile energy storage?

Mobile energy storage provides a clean alternative to diesel generators for locations with no grid connection or only a weak one. Grid congestion creates increasingly long waiting times for companies who want to increase their grid connection. Mobile energy storage is the temporary solution to keep your business running.

Is Alfen mobile energy storage sustainable?

Alfen's mobile energy storage products are sustainably produced, fully recyclable, and ensure zero emissions on-site. Mobile energy storage provides a reliable power solution that is easy to operate and robust enough to withstand harsh conditions. Perfect for temporary energy needs.

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.
