

Angola lithium iron phosphate energy storage project

Overview

Are lithium ion phosphate batteries the future of energy storage?

Amid global carbon neutrality goals, energy storage has become pivotal for the renewable energy transition. Lithium Iron Phosphate (LiFePO₄, LFP) batteries, with their triple advantages of enhanced safety, extended cycle life, and lower costs, are displacing traditional ternary lithium batteries as the preferred choice for energy storage.

Who owns Angolito & Tyranna Resources?

Tyranna Resources is a mining exploration company, which owns Angolito as a subsidiary. How did you identify the potential that the Namibe province has in terms of lithium resources?

Peter SPITALNY: In the last years of the 2010s, the market's general attention was on the more traditional metal commodities, such as gold, copper and nickel.

Did Angola have a potential?

After some research, we came to the conclusion that the southern part of Angola, specifically near the town of Namibe, had huge potential. It had a known pegmatite field; it had known lithium minerals; and it had almost no work done. Angola, in general, is like that in terms of minerals: pick a mineral or a commodity, and you will find it here.

Which countries are promoting energy storage in 2023?

Policy Drivers: China's 14th Five-Year Plan designates energy storage as a key development area, while Europe and the U.S. promote residential storage through subsidies. - Plummeting Costs: By 2023, LFP battery costs fell below ¥0.6/Wh (\$0.08/Wh), 30% cheaper than ternary batteries.
