Are arc flash and arc-flash studies a safety concern?

Arc-flash and arc-flash studies are also clarified. This White Paper also highlights a safety concern when HV/MV switchgear fails catastrophically, particularly oil-filled switchgear assembly. Within IEC Standards, HV switchgear are used on systems above 1 kV up to 52 kV. In North America MV is any voltage between 600 V and 69 kV.

Does switchgear have an internal arc type test?

When IEC 62271-200 was implemented in 2003, if switchgear was internal arc tested, the main MV compartments were tested, i.e. the switching, busbar and connection compartments. It is also a common misnomer that the internal arc type test is mandatory. The internal arc type test is an optional test within IEC 62271-200.

How to evaluate arc rated switchgear in Canada?

Canada use CSA C22.2 No. 0.22-11 "Evaluation methods for arc resistance rating of enclosed electrical equipment" to evaluate internal arc rated switchgear. Internal arc type testing is very important to reduce the risk of exploding switchgear.
