

Avl uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

Is the AVL e-store LV a battery tester?

The E-STORAGE LV is available as a battery tester (BT), emulator (BE), and a combined tester and emulator (BTE). The user-friendly battery testing automation software AVL LYNX 2™ makes the AVL E-STORAGE LV compliant with the requirements of the test run standards (ISO12405, VDA, etc.).

What is the primary power path in a standby UPS?

The primary power path in a standby UPS often includes LC filters to reduce electrical noise and surge protection circuitry for shielding against voltage spikes. An illustration of a standby UPS system.

What is AVL Racetech?

AVL RACETECH, the motorsport department of AVL, presents the prototype of an innovative H2 internal combustion engine. The power unit is a compact, hydrogen-powered 2-liter turbo engine, with intelligent water injection, which achieves a totally new performance level. The first racing engine that AVL RACETECH is developing and building in-house.
