

BESS air energy storage project bidding information

Overview

What does Bess stand for?

The tender for the design, manufacture, installation and 20-year operations & maintenance (O&M) of battery energy storage systems (BESS) for Power China's 2025-2026 projects was announced on 13 November, and the results were released last week.

When will Bess projects be developed?

The BESS projects will be developed in key regions across the kingdom: In December 2024, SPPC announced the list of qualified bidders. The bid submission deadline is set for 2 June 2025. Each project will be developed under a build-own-operate (BOO) model, with the selected bidder holding full ownership through a special purpose vehicle (SPV).

Does Bess participate in active and reactive power prices?

To evaluate the positive impact of BESS participation in the active and reactive power prices, a new performance index as the average active and reactive power price is introduced by dividing total prices during a day by 24, as shown in Fig. 20.

How much does Bess cost?

BloombergNEF recently noted a global average price for BESS (without PCS or EMS) of US\$125 per kWh, for example. Kubik suggested the tender's requirements implied it covered an AC block solution. Energy-Storage.news looked at the move towards PCS-integrated AC blocks in a recent article (Premium access).
