

Battery cabinet charging test requirements

Overview

What are the testing requirements for battery cabinets?

VDMA 24994 defines the testing requirements for battery cabinets. Only cabinets that pass rigorous practical tests with lithium-ion batteries receive an ECB-S certificate. Testing can only be carried out by accredited laboratories. In Europe, there are just two: MPA Dresden (Germany) and GryfitLab (Poland), both recognised by ECB-S.

What are the test requirements for a battery charger?

The combined use of batteries, chargers and charging stations in various different operational states often leads to several test requirements for these, including: testing for safety, performance, component interoperability, energy efficiency, electromagnetic compatibility (EMC), hazardous substances, chemicals and explosion safety.

Should lithium-ion batteries be stored in a certified battery safe?

In many cases, they now require that lithium-ion batteries be stored and charged in a certified battery safe. The VDMA 24994 testing requirements are not a standalone solution. It's currently being used as the basis for a new European standard for lithium-ion battery storage. That standard is under development, but formal adoption may take years.

What is a battery charge & discharge test chamber?

The battery charge&discharge test chamber is a device specially designed for charging and discharging safety tests on batteries (such as lithium-ion batteries).This type of test chamber can simulate the extreme charge and discharge conditions that the battery may encounter in actual use to evaluate
