

Can lithium iron phosphate battery packs be connected in parallel

Overview

Can I connect lithium iron phosphate (LFP) batteries in parallel?

If you have ever sought information about connecting Lithium Iron Phosphate (LiFePO₄ or LFP) batteries in parallel for your application and been left confused by conflicting information, let me clear the buzz and explain why some sources allow us to connect LFP batteries in parallel and others do not recommend it at all.

Can LiFePO₄ batteries be connected in parallel?

Yes, LiFePO₄ (Lithium Iron Phosphate) batteries can be connected both in series and parallel configurations. Connecting in series increases the overall voltage while maintaining the same capacity, whereas connecting in parallel increases the capacity while keeping the voltage constant.

Can lithium-ion batteries be connected in parallel or in series?

Connecting lithium-ion batteries in parallel or in series is not as straightforward as a simple series-parallel connection of circuits. To ensure the safety of both the batteries and the individual handling them, several important factors should be taken into consideration.

What happens if you connect two lithium batteries in series?

Two 12.8V-100AH lithium batteries connected in series becomes a 25.6V-100AH battery bank with 2560 watts of stored energy potential to 100% DOD. Connecting batteries in Series increases the battery bank voltage and total stored energy.
