# Can solar lighting be connected to an inverter

## Overview

---

It is possible to directly connect solar panels to an inverter without a charge controller. However, using a high-quality solar power inverter that can fulfil various functions is important. Why do I need to connect more solar panels to my inverter?

There are two reasons why you might need to connect more solar panels to your inverter. A solar panel does not work 100% efficiently. There will always be some variables such as weather variations that hinder the panel from collecting solar energy at its maximum.

Does a solar panel send current to an inverter?

However, a solar panel does not send current to an Inverter. An Inverter pulls the current it needs from the solar panel. If the solar panel is 10kilowatts and your inverter needs 5kilowatts, the inverter will only pull 5kilowatts from the solar panels. If you have more space on your rooftop to add more panels, then you should add them.

How do I connect my solar panels to an inverter?

The first step in connecting your solar panels to an inverter is thorough planning and preparation. Assess your energy needs, identify an optimal location for both solar panels and the inverter (with access to direct sunlight and proximity to the electrical panel), and obtain any permits or approvals required by local authorities.

Can a 12V inverter be directly connected to a solar panel?

Yes, a 12V inverter can be directly connected to a solar panel. However, the direct connection is not commonly recommended because solar panels do not provide a stable voltage output. To ensure a stable power supply, it's advantageous to use a charge controller between the PV solar panel and the inverter.
