

Carrying solar panels

Overview

How to transport solar panels?

Usually, to transport solar panels, a pallet is used. Here is how a good company packs it:

- First panels go on the pallet bottoms up and the last one is placed front side up.
- Corner protectors and foam pads across the frame are added.
- Usually a piece of cardboard or plastic is placed in between every two panels.

Can solar panels be transported around the world?

Unfortunately, the protocol for transporting PV modules that would become a standard for everybody hasn't been developed yet. Solar industry is still young, and panels from manufacturers around the world are all different. However, some lessons have been learned and general guidelines for moving solar panels around are already worked out.

How do you carry solar panels to a garage?

If you choose to carry panels in your hands to your garage, try not to apply too much pressure in one spot of a panel. It's best to distribute its weight across your shoulder, arm and back. The installation of solar panels is usually handled by professionals. Normally, they would use a mechanical lift to get your panels up on the roof.

How to choose the right shipping method for solar panels?

The freight forwarder needs to ensure that the packaging material is suitable for the specific type and size of the panel. Shipping method: Choosing the right shipping method (air, sea or rail) is a critical decision that affects the cost and safety of shipping solar panels. Each mode has its advantages and challenges.
