## Overview

---

What is energy storage duration?

When we talk about energy storage duration, we're referring to the time it takes to charge or discharge a unit at maximum power. Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe.

Should energy storage systems be recharged after a short duration?

An energy storage system capable of serving long durations could be used for short durations, too. Recharging after a short usage period could ultimately affect the number of full cycles before performance declines. Likewise, keeping a longer-duration system at a full charge may not make sense.

How long does a battery energy storage system last?

Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe. Pumped Hydro Storage: In contrast, technologies like pumped hydro can store energy for up to 10 hours.

What is an energy storage system battery?

Like a common household battery, an energy storage system battery has a "duration" of time that it can sustain its power output at maximum use. The capacity of the battery is the total amount of energy it holds and can discharge.
