

# Direct roof solar panels

## Overview

---

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

What is a rooftop solar system?

A rooftop solar system is an array of solar panels installed on a roof, each containing several solar cells that absorb sunlight and create an electric field across each panel. Roof-mounted solar systems are more discreet than solar setups installed at ground-level because they are hidden from view, and they save space on the property.

Are in-roof solar panels right for Your House?

They integrate smoothly into your roof during construction or when you're replacing an old roof, avoiding the visual clutter of typical installations. Blending seamlessly with your roofline, in-roof solar panels can be a game-changer for your home. Here's why:.

Can solar panels be installed on a roof?

By placing panels on a rooftop, solar panels are optimally exposed to sunlight and produce enough electricity to power homes and buildings. First, a group of solar panels is installed on a roof, typically at an angle to absorb maximum sunlight.
