

Double glass components for sun room

Overview

Is double-paned glass suitable for a sunroom?

For a homeowner in a mild climate, double-paned glass may be sufficient to keep a sunroom comfortable. However, tinted glass, which has many of the heat-reducing benefits of Low-E coating, also dims the light that comes into the sunroom. This can be beneficial in sunrooms where people plan to watch television, as it reduces glare.

What type of glass is used to build a sunroom?

This will give you a better idea of what type of glass is being used to build your room. A truly insulated sunroom is built using double-pane glass - never single pane glass. Between the layers of glass is usually an inert gas such as Argon, which provides a barrier to insulate the room from outside temperatures.

How do I choose the best glass for my sunroom?

Where you choose to build your sunroom will also help determine which type of glass makes the most sense for your unique project. While sunroom location and type are very important, the safety of the glass is also a necessary consideration. Make sure that you ask for tempered glass.

Should you build a sunroom with floor-to-ceiling glass?

To maximize a great outdoor view from your home, a sunroom with floor-to-ceiling glass, also called a solarium, could be the right choice for you. This special sunroom has wall-to-wall glass as well as a glass roof. Where you choose to build your sunroom will also help determine which type of glass makes the most sense for your unique project.
