

# **Energy storage cabinet battery to make emergency power supply**

## Overview

---

What type of batteries are used in energy storage cabinets?

Lithium batteries have become the most commonly used battery type in modern energy storage cabinets due to their high energy density, long life, low self-discharge rate and fast charge and discharge speed.

What is energy storage cabinet?

Energy Storage Cabinet is a vital part of modern energy management system, especially when storing and dispatching energy between renewable energy (such as solar energy and wind energy) and power grid.

Are battery energy storage systems effective?

Battery energy storage systems are particularly effective in these scenarios due to their swift response, environmental benefits, and efficiency. Whereas delayed response systems maintain essential functions and comfort during outages, decreasing the urgency for uninterrupted power supply.

Why do energy storage cabinets use STS?

STS can complete power switching within milliseconds to ensure the continuity and reliability of power supply. In the design of energy storage cabinets, STS is usually used in the following scenarios: Power switching: When the power grid loses power or fails, quickly switch to the energy storage system to provide power.
