

Fix solar panels on tiles

Overview

Can a tile roof handle solar panels?

If you have a tile roof and are considering solar energy, you might be wondering whether your roof can handle solar panels. Tile roofs—especially lightweight cement or clay tiles—are beautiful and durable but also delicate. Unlike asphalt shingles, they can crack easily under pressure, which makes solar installation a bit more challenging.

How do you install solar panels on a tile roof?

To install solar panels on a tile roof, solar installers attach solar racks by taking out individual tiles and cutting or drilling small holes in them. Alternatively, they place similarly shaped tiles in between the rows of panels to maintain a neat appearance.

What is the new way to replace tiles for solar installation?

The new, better way: Double-flashed tile replacements that perfectly fit in place of a single tile. Replacing small sections of tile with composite shingles, installing mounts meant for composite shingle roofs, and placing dummy tiles over the holes. Cutting or drilling into tiles to attach hooks under them that support solar racks.

How can I repair my solar panels?

To repair your solar panels, start by checking the mounting frame for damage. Ensure that the bolts and cables holding it in place are not damaged. If there has been damage due to strong winds, tighten the solar panels down to secure the mounting frame.
