

Fixed-type energy storage containers for power grid distribution stations

Overview

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

What is fixed energy storage?

Fixed energy storage refers to energy storage equipment installed in a fixed position, which can improve the stability and reliability of the power system. Fixed energy storage has a large storage capacity and stability, suitable for long-term operation and can meet large-scale power storage needs.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO₄) combined with an intelligent 3-level battery management system (BMS);.

Can a fixed and mobile energy storage system improve system economics?

Tech-economic performance of fixed and mobile energy storage system is compared. The proposed method can improve system economics and renewable shares. With the large-scale integration of renewable energy and changes in load characteristics, the power system is facing challenges of volatility and instability.
