

Floating solar panel manufacturers

Overview

Where are floating solar panels coming from?

Floating solar technology is comparatively nascent in Europe, but it has already found a foothold in the Netherlands. This densely populated country is the most active market in Europe for floating solar, as space for ground-mounted installations is at a premium.

What is floating solar?

Floating solar refers to the installation of solar panels on bodies of water. It is cost competitive with roof and ground-based single-axis tracking solar systems and uses the same commercially available solar panels. Similar to land-based solar, the floating installations qualify for federal and local grant and incentive programs.
