

# Garden Solar Irrigation System

## Overview

---

What is a solar photovoltaic irrigation system?

Solar photovoltaic (PV) panels create electricity, which is used to power pumps that collect, lift, and distribute irrigation water in a solar-powered irrigation system (SPIS). From individual or community vegetable gardens to huge irrigation schemes, SPIS can be used in a variety of settings.

What is a solar-powered irrigation system?

A solar-powered irrigation system ensures the field's corpus is well watered daily. Unlike other energy sources such as biogas, coal, etc., solar energy does not emit greenhouse gases, reducing the severe impact on the ozone layer and the overall environment.

Does a solar power drip irrigation system use less water?

Not only does the drip irrigation system use less water, we also run the system pump on 100% solar power. The cherry on top is putting the pump on a timer, making the task of garden watering fully autonomous. You may be intimidated about setting up a solar power drip irrigation system, but it's not hard at all.

Can a solar powered irrigation system be used with a garden extension kit?

Our range of solar powered irrigation systems can be installed to suit any garden watering needs when used in conjunction with our irrigation extension kits. Our Irrigation Units help you determine which irrigation kit you will need.
