

Germany Folding Container Two-Way Charging Discount

Overview

Is bidirectional charging allowed in Germany?

Yes, the symbiosis EV and bidirectional charging is permitted. Since April 2022, the ISO 15118-20 standard has regulated communication between electric cars and charging equipment for bidirectional charging.

Will Germany introduce a V2G charging system in 2025?

The system requires the PowerBox Verso, a special charging station for bidirectional charging, and the Mobilize Power energy contract managed by The Mobility House. The introduction of this V2G technology will not only take place in France but also in the UK from 2025. In the meantime, Germany is still examining how to implement it.

Is Germany achieving indiscriminatory bidirectional v2h & V2G charging?

Germany is the world's second-largest producer of electric cars after China. The country has recently presented a roadmap for achieving indiscriminatory bidirectional V2H and V2G charging. Basically, it is about ensuring that the system works equally for all users, types of electric cars, or charging equipment.

What is 'Plug & Charge'?

At the heart of the bidirectional charging capability lies ISO 15118, an international standard for electric car charging. This is basically a universal language that allows vehicles and charging stations to communicate with each other, no matter the brand. This standard is what makes "Plug & Charge" possible.
