Overview

How long do solar panels last?

What Is the Lifespan of Solar Panels?

Typically, the lifespan of solar panels is anywhere from 25 to 30 years, making them a remarkably durable component of solar photovoltaic (PV) systems. This longevity surpasses that of many other household systems, such as boilers, which usually have a life expectancy of 10 to 15 years.

How can I extend the lifespan of my solar panels?

Here are some tips that can help you extend the lifespan of your solar panels: Investing in a high-quality solar photovoltaic system from a reputable manufacturer like FusionSolar is the first step toward ensuring long-term performance and durability.

What factors affect the lifespan of solar panels?

Several factors impact what affects the lifespan of solar panels, including: **Quality of Materials:** Panels made with premium photovoltaic cells degrade more slowly. **Weather Conditions:** Extreme heat, hail, heavy snow, and strong winds can accelerate wear.

How long do monocrystalline solar panels last?

Generally speaking, the degradation rate of monocrystalline solar panels is 0.5% per year. This means that, after 30 years, most monocrystalline solar panels on the residential market will produce 87% of their original power output. To learn more about solar, check out our rundown the top 17 facts about solar panels.

My Experience with Solar Panel Aging
I already mentioned above that solar panels will gradually reduce efficiency by about 0.5% per year. In my case, it has been a lot less, but it's a good average to work on. What you need to do to determine if your solar panels have significantly declined in efficiency is to pick a day in late spring or early summer when you hav...
