

How to connect the solar power supply of the base station cabinet

Overview

Can you connect a solar panel to a power station?

With some basic understanding and the right tools, you can connect almost any solar panel to almost any power station. Each power station has a solar input that has a specific connection. As long as you match this connection type and don't exceed the limits of your power station, you can use any solar panel.

How does a utility meter connect to a solar panel?

There is an ALTERNATIVE UTILITY CONNECTION called a "Supply or Line Side" connection. This connection is made BEFORE the main breaker. A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box.

Can I use a Jackery solar panel for my power station?

As long as you match this connection type and don't exceed the limits of your power station, you can use any solar panel. For example, many Jackery power stations have an 8mm connection type. You can get a Jackery solar panel and those will usually come with the right adapter for your power station.

What type of cable should a solar power station use?

With solar cables, longer or thinner wires mean less power reaches your power station. It can also be a hazard to use inappropriate cables. For many solar setups, 12 AWG (American Wire Gauge) cable is the sweet spot. It handles up to 30 amps safely while remaining flexible and cost-effective.
