

How to install the base station power module

Overview

How do I configure a single base station?

Single base stations need a control connection to their site controller. A single base station interfaces to the site controller in the same way as the master base station in a trunked channel group. Select Configure > Network Interfaces > Trunking to configure this. You can program a receiver with the same configuration as a reciter.

How do I connect a PC to a base station?

Remove the local area Ethernet connection and connect an Ethernet patch cable between the PC and the base station. You can use either straight through or crossover Ethernet patch cable with the current base station firmware. Click Start > Settings > Control Panel. Double-click Network Connections.

How do I connect a reciter to a 50W base station?

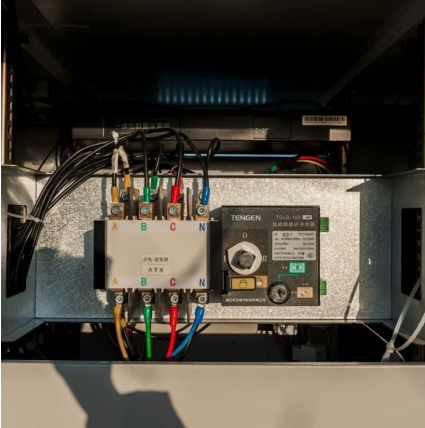

The DC supply to the reciters is via the system control bus ribbon cable. The connections between modules at the front of a single 50W base station are shown below. The PA is powered by a direct connection from the PMU. The reciter is powered from the PMU via the subrack interconnect board and system control bus ribbon cable.

How do I connect a tb9400 reciter to a base station?

Mount the reciter in a TB9400 subrack and fit the front panel. Power up the subrack. On the front panel display select Modules > Reciter 1 (or 2) > View Reciter 1 (or 2) Address. Connections to the base station can be authenticated by a remote (i.e. centralized) service (Tools > Settings > Authentication).
