How to turn off the base station power function

Overview

How do I Turn on a base station?

Press the Channel buttons at the back of the base stations so that one base station is set to channel “A”, while the other is set to channel “b”. Once turned on, do not move or adjust the angles of the base stations as it could disrupt the tracking process.

Can a basestation be plugged in without power management?

Next go to SteamVR -> Settings -> Basestation and click Power Management to access the correct interface page. Yes - since the basestations are mechanical devices, if you leave them plugged in without power management enabled and they stay fully powered on and spinning - that uptime will count against the unit's lifespan.

How can I tell if a basestation is spinning?

You can definitive tell if a basestation's rotors are spinning and emitting data if you can see the faint circles from the 9 sync LEDs on 1.0 stations or the two laser sources on a 2.0 station (final two pics). You can use a smartphone camera to see the IR sources inside the station if you can't quite see it with the naked eye.

How does BT power management work?

The overall key with BT power management is that it's mediated by commands outputted by the compositor - if you abruptly stop the compositor (like a hard PC reboot) or it crashes - you may need to cycle SteamVR to re-sync everything. OK, I tried both base stations power management options.
