

Installation specification requirements of battery cabinet in computer room

Overview

Institute of Electrical and Electronic Engineers (IEEE) 484 Recommended Practice for Installation Design and Installation of Vented Lead Acid Batteries for Stationary Applications National Fire Protection.

How should a battery room be located?

This will reduce the cost and exposure of the dc distribution system. The battery room shall be located in a way that provides access for lifting equipment to be used during initial installation and future maintenance operations. The location shall be as free from vibration as practical.

Do vented lead acid batteries need a separate battery room?

Vented lead acid batteries installed in medium voltage main substation buildings and unit substations, electrical equipment rooms and control system rack rooms shall not require a separate, dedicated battery room and shall be in accordance with SES E14-S02. The battery room and installation shall comply with IEEE 484, NFPA 70 and OSHA 29 CFR.

Where should batteries be installed in a substation?

Batteries installed in unit substations, electrical equipment rooms and instrument rack rooms shall comply with the requirements of this section, Main Substation Design and Unit Substation Design. In these locations, stainless steel hoods vented to the outside shall be installed over batteries.

How to choose a battery room?

The location shall be selected so as to protect the battery from flooding and other natural phenomena, and from fire and explosions in the operating areas. The overall dimensions of the battery room shall permit an orderly layout of the battery rack (s).
