## Overview

---

What is a battery management system (BMS)?

A Battery Management System (BMS) is an electronic system that manages and monitors the charging and discharging of rechargeable batteries. A given BMS has many different objectives such as: I/V (current/voltage) monitoring, cell balancing, temperature monitoring, over-current protection and short circuit protection, etc.

What is a battery management system?

The battery management system is an electronic system that controls and protects a rechargeable battery to guarantee its best performance, longevity, and safety. The BMS tracks the battery's condition, generates secondary data, and generates critical information reports.

What is a multi-master battery management unit (BMS)?

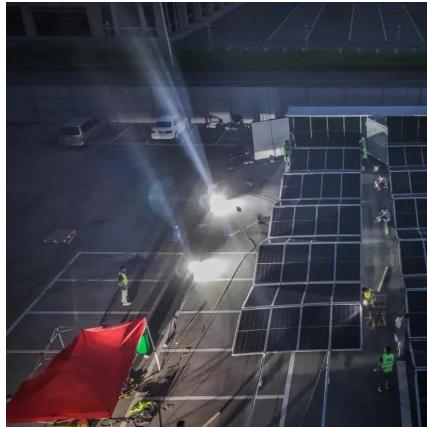

NX-Tech's BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.

What is a BMS battery & how does it work?

These protections include over-current (OC), over-voltage (OV), under-voltage (UV), over-temperature (OT), and under-temperature (UT) conditions. The BMS guarantees the battery's longevity and safety by prohibiting it from running outside of its safe operating area (SOA).
