

London restricts solar glass

Overview

When should I use solar control glass?

Solar control glass is recommended where solar gain can be a problem in summer months for example windows facing south and southwest. Solar control glass can also be used in conservatories and skylights to reduce solar gain from direct sunlight.

Why is solar control glass important?

Solar control glass is ideal for helping to maximize natural daylight while reflecting a high proportion of solar radiation away from the glass, contributing to keeping the indoor space bright but cool. What are the benefits of solar control glass?

.

Does solar control glass reduce glare?

It reflects and absorbs heat as well as filtering light for reduced glare. Using a solar control glass can reduce the need for air-conditioning and blinds. There are many types of solar control glass offering different aesthetic options; tinted, reflective and neutral.

Is solar control glass a good option for a building?

The increased use of glass in architecture today makes it imperative to consider the comfort of a building's occupants. Solar control glass can be an attractive feature of a building whilst at the same time minimising, or even eliminating the need for an air conditioning system, reducing running costs of the building and saving energy.
