

# Maximum temperature for battery cabinet storage

## Overview

---

What temperature should a lithium battery be stored?

The ideal operating temperature range for lithium batteries is 15°C to 35°C (59°F to 95°F). For storage, it is best to keep them in a temperature range of -20°C to 25°C (-4°F to 77°F). Extreme temperatures can significantly affect performance, safety, and lifespan.

What temperature should a battery be stored?

For best results, store batteries within the range of -20°C to 25°C (-4°F to 77°F) when not in use. Storing within this range helps maintain its capacity and reduces the self-discharge rate. Above 25°C (77°F): Accelerates the aging process. Below -20°C (-4°F): Can cause irreversible damage to the battery.

Do energy storage battery cabinets have a cooling system?

Provided by the Springer Nature SharedIt content-sharing initiative The cooling system of energy storage battery cabinets is critical to battery performance and safety. This study addresses the optimization of heat dissipat.

How can energy storage battery cabinets improve thermal performance?

This study optimized the thermal performance of energy storage battery cabinets by employing a liquid-cooled plate-and-tube combined heat exchange method to cool the battery pack.
