

Monocrystalline PERC module price

Overview

If you compare the price per watt, a standard rule of thumb is that Mono-Si solar modules are priced around \$0.65/Wp, while Mono PERC modules can be anywhere between \$0.70/Wp and \$0.80/Wp depending on the level of efficiency. Are mono-crystalline panels cheaper than PERC modules?

In terms of cost, mono-crystalline (standard) panels are slightly cheaper compared to perc modules. The extra cost associated with the use of passivated layers in mono-perc modules increases the overall pricing. However, if we compare price with per unit of energy produced – then it is the same for both modules.

What is PERC monocrystalline solar panel?

PERC monocrystalline solar panel is the latest technology and powerful solar panel. It uses PERC cells which are considered to be the latest invention in the solar field. PERC stands for Passivated Emitter and Rear Contact.

What is a monocrystalline PERC cell?

A monocrystalline PERC cell is a more advanced version of the mono cell. It uses additional layers on the rear side of the cell to help capture more energy and increase efficiency.

When will PERC & BC modules be available in Europe?

In Europe, the public pricing for PERC modules will be cancelled from May 2025. In Europe, the public pricing for BC modules (residential and C&I) will be added from June 2025. InfoLink Consulting provides weekly updates on PV spot prices, covering module price, cell price, wafer price, and polysilicon price.
