

# Niger factory uses energy storage power supply

## Overview

---

What is the energy system like in Niger?

The most striking feature of Niger's energy system is the dominance of biomass. This represents 79% of total consumption and meets 83% of household energy needs. Biomass in the form of fuelwood, charcoal, and agricultural residues is used in inefficient cooking appliances.

Does Niger have sufficient energy resources?

Niger enjoys sufficient resources to make major progress in meeting energy access targets, especially solar and to some degree wind. Renewable energy options like solar and wind should feature prominently in the master plan.

How can Niger balance its energy mix?

This transformative project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better balance its energy mix, which is currently largely dominated by thermal energy. This initiative is particularly crucial for a country that frequently faces climatic shocks.
