

Norway Emergency Energy Storage Power Supply

Overview

Who manages the power sector in Norway?

Organisation The Ministry of Petroleum and Energy has overall responsibility for managing the power sector in Norway. The legislation for security of electricity supply and emergency preparedness is outlined in Chapter 9 of the Energy Act and the Regulation on Security and Emergency Preparedness in the Power Supply System.

Does Norway have energy security?

Norway is not dependent on the import of any energy source and, hence, energy security in Norway does not relate to security of supply but rather broader energy security: the operation of hydropower plants and the potential disruptions they may face, either from hybrid attacks or weather events.

Does Norway have an energy security nexus?

Prior to 2022, Norway had barely considered the energy-security nexus due to substantial domestic energy supplies. Some interconnections were, however, visible via three cases: the economic security provided by oil and gas exports, security of hydropower infrastructure, and internal tensions around wind power.

Does Norway have a security of supply?

Security of supply was very rarely discussed by the interviewed experts in Norway prior to 2022. When it was mentioned, it was mainly in the context of electricity (as opposed to the defence sector security of supply, which pertained to oil and petroleum products).
