Overview

What is Solar Operations & Maintenance (O&M)?

Solar operations and maintenance (O&M) is a set of activities carried out to ensure that solar power plants are running smoothly and efficiently. Solar O&M includes- Let us take a closer look at each type of maintenance and How they can keep your Solar Power Plant running like a well-oiled machine.

Why do solar plant operators need monitored data?

Solar plant operators require monitored data to analyze and identify the root cause of performance issues observed by the operator. It is critical to identify the root cause of failure to reduce maintenance costs when dispatching service providers.

How do I backup my solar monitoring system?

Reliable data backup and storage should be provided. A best practice is for data loggers to store 6 months of data and to backup data to cloud storage. A reliable method to “backhaul” the data is required. Most connect to the internet via DSL, but be aware that many site owners will not allow the solar monitoring system to use the site network.

Do energy storage products need periodic maintenance?

The requirements for periodic maintenance for energy storage products should be identified by the OEM (IEEE 2010). In settings where predictive analytics maintenance is economical, guidance should also be available from the manufacturer that identifies methodologies for assessing when a product may be approaching a failure mode.
