

Paris Solar Electric System

Overview

What is the Paris solar park?

The Paris Solar Park officially went into service this week. The 200-megawatt (MW) project in the Kenosha County town of Paris features nearly 500,000 solar panels capable of providing enough energy to power about 60,000 homes. The project was built primarily by Wisconsin union workers.

How does the Paris solar park work?

The park's solar panels move and track the sun throughout the day, maximizing power generation. The panels also capture solar energy on both sides — an especially useful feature in winter when sun reflects off the snow and onto the panels. The Paris Solar Park will provide both immediate and long-term savings to We Energies customers.

How will the Paris solar park benefit WE Energies customers?

The Paris Solar Park will provide both immediate and long-term savings to We Energies customers. The facility is already eligible for federal tax credits that will provide millions of dollars per year of savings to customers. And since the facility is powered by the sun, it does not require outside fuel, further reducing costs.

Will 78 kWp solar power Paris Olympic Village?

Energy World's largest, 78 kWp floating solar plant powers Paris Olympic village The 78 kWp solar installation will provide clean energy to the Olympic and Paralympic Square, showcasing its flexibility and ease of setup.
