

Price of grade A solar panels

Overview

Are Grade B solar panels worth it?

Grade B solar panels typically fall under the market value and are sold at lower prices than grade A solar panels. If you need solar panels for a countryside barn or remote location, or they'll be far from prying eyes, they are great for performance at a reasonable price.

Are Grade C solar panels worth it?

Grade C solar panels have visual and performance defects, causing them to fall far behind in desirability. Grade C solar panels usually sold overseas at far lower prices in third-world countries. Buying these solar panels is not worth it as they break down much faster and don't make nearly as much power as grade As and Bs.

What is the grading system for solar panels?

The grading system goes A for the best, B for visually defective panels but meet performance benchmarks, C for visually and performatively defective solar panels, and D for broken solar panels. Most manufacturers and distributors only sell grade A and B solar panels, scrapping C solar panels and recycling D solar panels.

How many grades of solar panels are there?

There are four grades of solar panels, but only three of them are usable. Some manufacturers may expand upon this with pluses and minuses to show how individual solar panels rank, but this is rare.
