

Replace the base station module power supply

Overview

How do I replace a power supply?

Identify the power supply you want to replace, based on console error messages or through the red Fault LED on the power supply. Open the power cable retainer, and then unplug the power cable from the power supply. Unplug the power cable from the power source.

How do you remove a power supply from a controller module?

Open the power cable retainer, and then unplug the power cable from the power supply. Unplug the power cable from the power source. Rotate the cam handle such that it can be used to pull power supply out of the controller module while pressing the locking tab. The power supply is short.

How long does it take to replace a power supply?

It is a best practice to replace the power supply within two minutes of removing it from the chassis. The system continues to function, but ONTAP sends messages to the console about the degraded power supply until the power supply is replaced. You can use the following video or the tabulated steps to replace the power supply:.

How do you lock a power supply?

Using both hands, support and align the edges of the power supply with the opening in the controller module, and then gently push the power supply into the controller module until the locking tab clicks into place. The power supplies will only properly engage with the internal connector and lock in place one way.
