

Sanaa Mobile s solar container communication stations have multiple wind and solar complementarity

Overview

What is a solarcontainer?

Solarcontainer explained: What are mobile solar systems?

The Solarcontainer represents a grid-independent solution as a mobile solar plant. Especially in remote areas it can guarantee a stable energy supply or support or almost replace a public grid with strong power fluctuations, as well as diesel generators that are used.

Can a solar base provide a consistent power supply?

This indicates that these bases can maintain a consistent power supply using wind and solar energies throughout the day. In addition, approximately half the time support both wind and solar power generation. Additionally, approximately 50 % of nighttime hours allow wind energy to complement solar energy.

Can a solar container be used as a power generator?

In order to be able to use the high PV output when there is limited sun exposure, the solar container can also be used in combination with an energy storage device. Especially in completely self-sufficient applications, diesel aggregates are often used as power generators.

Are Gobi Desert and grasslands suitable for wind-solar complementary power generation?

As a result, the extensive and open gobi desert and grasslands in northern China were identified as optimal sites for wind-solar complementary power generation (Fig. 4 c, d, e). The complementary effect between wind and solar energy in the JL and HS bases showed two peaks in spring and autumn, with the weakest effect in winter.
