## Overview

---

What is a battery management system (BMS)?

The Battery Management System (BMS) is the hardware and software control unit of the battery pack. This is a critical component that measures cell voltages, temperatures, and battery pack current. It also detects isolation faults and controls the contactors and the thermal management system.

What does a battery management system do?

It also detects isolation faults and controls the contactors and the thermal management system. The battery management system protects the operator of the battery-powered system and the battery pack itself against overcharge, over-discharge, overcurrent, cell short circuits, and extreme temperatures. introduction to battery management systems.

How big is the battery management system market?

The rise in popularity of battery management systems (BMS) is undeniable, but it can be challenging. According to a Mordor Intelligence report, the BMS market will be nearly 12 billion dollars by 2029. The reason is relatively straightforward.

What is BMS & why is it important?

BMS is the “nerve center” of the battery system, and its technological level directly determines the safety, lifespan, and performance of the battery. With the outbreak of the new energy industry, BMS is rapidly evolving towards a more intelligent, precise, and reliable direction.
