

Shape of solar panel tiles

Overview

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

What are solar panel roof tiles?

Solar panel roof tiles are small photovoltaic panels shaped to look like normal roof tiles. They absorb sunlight to convert it into electricity in the same way that standard solar panels do.

How do solar tiles work?

Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof. Photovoltaic cells in solar tiles turn sunlight into direct current (DC) energy.

What is the difference between solar panels and solar tiles?

What's the Difference Between Solar Panels and Solar Tiles?

Both solar panels and solar tiles include photovoltaic (PV) cells which capture energy from the sun so it can be converted into electricity, enabling you to power your home using more free, renewable energy, lower energy bills and reduce your reliance on energy suppliers and fossil fuels.
