

# **Singapore high performance solar container battery**

## Overview

---

Does Singapore need a solar energy storage system?

SINGAPORE - As Singapore seeks to harness as much sunshine as it can to maximise its limited renewable energy sources, it needs to improve technologies that can store excess solar energy from the day. One such technology is energy storage systems (ESS), which are essentially giant batteries packed in containers that store electricity for later use.

Does Singapore need energy storage systems to manage solar intermittency?

However, the minister said there is a need to “step up energy storage systems to manage solar intermittency.” Talks are currently ongoing with Sembcorp, the engineering conglomerate behind the 200MW/285MWh battery energy storage system (BESS) installation on Singapore’s Jurong Island.

What is Singapore's solar energy system (ESS)?

Built across two sites on Jurong Island, our ESS enhances Singapore’s grid resilience by mitigating the impact of solar intermittency as the republic progresses towards achieving its 2030 solar target of at least 2GWp and energy storage systems deployment of 200MWh beyond 2025.

Will EMA & Sembcorp expand solar energy storage in Singapore?

With that one project, Singapore its 200MWh by 2025 energy storage target and minister Gan Kim Yong said it helps to “counteract sharp and unexpected drops in solar energy.” “EMA and Sembcorp are in discussions to expand the system and increase the land use density in tandem,” Yong said.

## Singapore high performance solar container battery
