Overview

How does a solar water pumping system work?

The solar water pumping system uses solar energy to pump water. The system operates on power generated using solar PV (photovoltaic) system. The photovoltaic array converts the solar energy into electricity, which is used for running the motor pump set. The pumping system draws water from the open well, bore well, stream, pond, canal etc.

What is a Solar Water Pump System?

UNS researchers created the Solar Water Pump System (Solar Water Pump System (Sistem Pompa Air Tenaga Surya / SPATS)) to be used as a solar radiation energy source, instead of using diesel fuel for water pumping.

What is a circulation pump?

These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops. We have a number of circulation pump solutions for all types of applications, from single family home hot water systems, to industrial heating and air conditioning systems.

What are solar panels plus pumping solutions?

Solar Panels Plus provides a number of different pumping solutions for solar hot water and solar space heating systems. These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops.
