Solar energy storage return

Overview

How to maximize the return on investment from solar energy production?

To maximize the return on investment from solar energy production, we must bridge the gap between production and consumption. Businesses and utilities can use Battery Energy Storage Systems (BESS) combined with a flexible controller. These systems capture extra energy when production is high and release it when demand or prices rise.

What are the returns from solar panels?

Returns from solar panels are a balance of the cost of solar panel installations, the Feed in Tariff rate, and electricity savings. The Government has intervened twice since the start of the scheme to reduce tariffs significantly: in March 2012 and in the first quarter of 2016.

What makes a solar & storage project profitable?

As the industry shifts toward grid decentralization and dynamic pricing, the most profitable solar + storage projects will be defined by the strategic integration of BESS, intelligent energy management systems (EMS), and advanced control technologies.

What is a solar return chart?

This chart is calculated for the time of the Sun's return this year and marks the principal events for the year from birthday to birthday. This report also gives the location of your Solar Return. From this, it can be determined that some places are more favorable than others.
