

Solar glass and balcony

Overview

Are solar balconies better than roof-top solar panels?

Due to easy access, the planning and installation of photovoltaic modules as solar balcony solutions is much easier than solar installations on roof-tops. Our solar balcony elements are simply mounted to the sides or floor. Furthermore, conventional railings do not show any economic benefits.

What is a glass balcony?

A glass balcony consists of a deck and a low wall made of very strong glass, more correctly called a glass balustrade. You might or might not have a metal railing, depending on the type of glass balcony you choose.

Are solar balcony modules a good investment?

Furthermore, conventional railings do not show any economic benefits. But apart from the economical aspect, solar balcony modules feature further major advantages. Every owner of a solar system knows that the shiny blue or black front of solar modules only covers a rather ugly back sight.

Why should you choose a sliding balcony system?

Enjoy your balcony - all year long. With sliding systems or slide-and-turn system made of glass, you not only protect yourself on your balcony from harsh weather conditions such as wind, rain and cold, but also from noise. The flexible glazing transforms your balcony into an airy outdoor seating area or a weather-protected room.
