

# Solar inverter power outage

## Overview

---

Does a solar inverter work during a power outage?

To ensure your solar inverter functions during a power outage, consider installing a hybrid solar inverter that is designed to work with battery storage. This type of inverter automatically switches to battery power when the grid goes down, allowing you to keep essential appliances running.

How do I keep my solar power inverter running during an outage?

To keep your solar power inverter running during an outage, having battery storage is essential. If you only have a grid-tied system, your inverter will shut down when the grid goes down to protect utility workers from potential hazards. In this situation, you won't have access to any solar energy being produced.

Can a solar inverter keep your power on in a blackout?

To keep your power on in a blackout, you need a solar inverter that can remove your home from the grid, along with a generator or battery for longer-term energy needs. By creating your own little "island" of a home with solar panels and batteries, you can run essential appliances for days during a power outage.

Can a solar system be used during a power outage?

It is possible to use a solar system during a power outage, but it requires the proper setup. This guide will explain how to use solar panels during a power outage, including inverters, batteries, and backup systems. We'll cover what works, what doesn't, and how to prepare your solar system for power outages.
