

# Solar module price corresponding to construction cost

## Overview

---

What is PV system cost model (pvscm)?

In the PV System Cost Model (PVSCM), the owner's overnight capital expense (cash cost) for an installed PV system is divided into eight categories, which are the same for the utility-scale, commercial, and residential PV market segments: Module - The cost to the installer of photovoltaic modules, as delivered.

How did our solar PV module manufacturing plant's financial model work?

Our solar PV module manufacturing plant's financial model was meticulously modelled to satisfy the client's requirements. It provided a thorough analysis of production costs including capital expenditures, manufacturing processes, raw materials, and operating costs.

What is the production capacity of solar PV module?

The proposed facility is designed with an annual production capacity of 1,000 MW (1 GW) of solar PV module. Manufacturing Process: The first step in the production of solar PV modules is the melting and solidification of high-purity silicon pieces into polycrystalline ingots.

What is the global solar PV module market size?

According to an IMARC study, the global solar PV module market size reached 1,386.1 TWh in 2024. Looking ahead, the market is expected to grow at a CAGR of approximately 14.36% from 2025 to 2033, reaching a projected capacity of 4,919.2 TWh by 2033. A number of important factors are driving the market for solar PV modules.
