

# Solar panel installation method

## Sloped roof

## Overview

---

Can solar panels be installed on a sloped roof?

A roof with a slope that faces south is optimal for the installation of solar panels, but the roof structure on some homes may not be structurally sound enough to support a solar array. The installer may need to modify the roof or install the panels on a freestanding ground unit rather than on the roof.

How do you install solar panels on a flat roof?

Ensure compliance with RC62 fire safety recommendations. Detect wildlife activity, such as bird nesting. When installing a solar panel system on a flat roof, two mounting methods are primarily used: ballasting and penetrative fixing.

What angle should solar panels be installed on a flat roof?

If you install your panels on a flat roof, you will need a mount to provide an angle of 10 degrees tilt for the panels to provide power optimally. Where you live also determines the ideal solar panel angle. The further north you go in Australia, the lower the latitude angle.

Can solar panels be installed on a tiled roof?

Solar panels can be installed on a tiled roof in three ways: by installing solar tiles directly onto the roof or by attaching panels using mounting brackets. Most people install solar systems on their existing houses ('retrofit') using this method.
