What is a solar pile & how does it work?

What is Piling?

Piling involves driving or drilling piles—long, slender columns—into the ground to provide foundational support for structures. In the context of solar parks, piles support the mounting systems for solar panels, ensuring they remain securely anchored in place regardless of weather conditions.

How do I choose a pile for a solar farm?

The load-bearing capacity needed for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities—such as those with large, heavy solar panels or in regions with significant wind forces—may necessitate the use of concrete or composite piles.
